The formation of solution of hydrochloric acid is evidenced by the instantaneous change of the blue colour to red. 73. Solution of Hydrochloric Acid.--A solution of this acid in water is one of the most useful and indispensable reagents in the laboratory, and therefore its preparation, and properties, and tests for its purity, become matter of great importance to the chemist. It is most conveniently prepared by the action given in the second equation on page 92. Place one part by weight of dry sodic chloride (common salt) previously fused, and two parts by weight of sulphuric acid (pre viously diluted with about one third of water) in a-capacious flask or retort, shake it well together, and connect it with two (or even three)...
