RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 112 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1889 Excerpt: . . . paths of the elements in the material. He suggests how this might be ascertained by allowing the same load to act in the same manner but for different periods on a number of like plastic blocks, in which a series of points had been previously marked by a three-dimensional wire netting placed in the molten metal. He notes also other methods likely to give the same result. In the course of the note he refers to the simple cases of plasticity solved by Levy, Boussinesq and himself: see our Arts. 255--61. At the end are a few lines from Tresca, who recognises the importance of the experiments proposed by Saint-Venant, which, I believe, he did not live to undertake. 268. Sur la manihre dont les vibrations calorifiques peuvent dilater les corps, et sur le coefficient des dilatations; Comptes rendus, 1876, T. ixxxn. , pp. 33--38. This is an attempt to represent thermal effects by the change produced by thermal vibrations directly in intermolecular distance rather than indirectly by their influence in altering the constants of molecular attraction. Saint-Venant deals with two molecules only and supposes one fixed. Let r_0 be the intermolecular distance in equilibrium, $r_0 + v$ the displaced distance and $f(r)$ the law of intermolecular action, then we easily find for our equation of vibration: $S. -V. 12, (n) (r.) j(r.) . . .$ If $\frac{dv}{dt} = v_0$, for v and 0, we have as a first approximation $v \approx \sin a, \dots$
