Second-year mathematics for secondary schools Volume 2

By George William Myers

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 50 pages. Dimensions: 9.7in. x 7.4in. x 0.1in.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1910 Excerpt: . . . circles, two central angles have the same ratio as the arcs intercepted by their sides. Let ABC (Fig. 155) be any central angle. By the preceding theorem it may be compared with the perigon ABA. ZABC arc AC. . . . ThenZABA arcTMA-Why Expressing ZABA and arc A M A by the number of units (degrees of angle and degrees of arc) they contain, respectively, we have ZABCarc AC 360 360 Multiplying through by 360, ZABC arc AC, in the sense that the number of angle degrees in Z A B C is the same as the number of arc degrees in the arc A C. As A B C is any central angle, the number of degrees in any central angle is the same as the number of degrees in the arc intercepted by its sides. This is more technically stated thus: Proposition II 159....
