Similarly a solution of chlorophyll, which in a thin layer appears green, transmits when very thick only the extreme dark-red rays. Absorption of the colouring matter of litem with different thicknesses of the layer. The absorption spectra being thus not less characteristic in demonstrating the presence of the bodies to which they belong than are the spectra of the light emitted from glowing vapours, spectral analysis opens up a wide field of application. The discovery of adulteration of colouring matters and of food may be particularly mentioned in practical life. 76. In the experiments hitherto made the rays emerging from the prism have been received upon a paper screen because the rough surface of the paper reflects the different coloured rays diffusely, enabling the complete spectrum to be seen on all sides. Instead of the usually perfectly white screen, another one may be selected, the upper half of which is covered with white and the lower half with red paper. The screen must be placed in such a position that the horizontal line of junction of the two papers halves the spectrum throughout its whole length. In its upper half, which See S and 15. falls upon the white paper, the spectrum exhibits all the colours as clearly as before, but in the lower half, which falls on the red paper, the colours yellow, green, blue, and violet are almost entirely absent, whilst the red and orange are almost as bright as...
