

## Baking technology Volume 1-2

By American Bakers Association

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 436 pages. Dimensions: 9.7in. x 7.4in. x 0.9in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: . . . is recognized as the indispensable forerunner of absorption. The outcome of the digestive disintegration of the ingested foodstuffs is, therefore, somewhat different from what one would have assumed only a few years ago. The ultimate sources of energy for the organism start as relatively simple chemical compounds on the path of distribution to the places where they are required for fuel or constructive enterprises. Amino-acids, other nitrogenous units like purins or nucleosides, simple sugars, and fats represent the particular types of matter that enter the transportation routes of the circulation. Sometimes they are built selectively into desired structures--into tissue fabrics or components of secretion; sometimes they are stored in special depots as fat or glycogen or protein to await a future demand for these reserves; sometimes they are at once consumed or, to quote the term used by the physiologist, they are metabolized. The analogies of...
